providing a polymeric support comprising one of more enzyme bonded thereto, wherein the polymeric support material has no pores or substantially no pores; extracting said hiomolecules from the group consisting of peptides, proteins, oligosaccharides, and polysaccharides; and

obtaining said biomplecules .--

--13. (Amended) A process for extraction, comprising:

providing a polymeric support comprising one or more enzymes bonded thereto, wherein the polymeric support material has no pores or substantially no pores; extracting insulins or their analogs from corresponding precursors; and obtaining said biomolecules.-

--14. (Amended) The process as in claim 12, in which said polymeric support material is a copolymer of the monomers methacrylamide and N,N'-

bis(methyacrylamide). --

--19. (Amended) The process as claimed in 17, wherein said enzyme has activity of 0.05 to 0.5 U/ml,--

-- 22. (New) The process as in claim 13, wherein said enzyme polymeric support material is a copolymer of the monomers methacryamide and N,N'bis(methacrylamide).--

--23. (New) The process as in claim 22, wherein said polymeric support material has oxirane group-containing monomers.
